

## **Future Expansion of RR Sites Map**

We have geo-located most of the sites in our database, which is known as the Bureau for Remediation and Redevelopment Tracking System (BRRTS), (excepting Spills, No Action Required, Abandoned Containers and General Property locations), and with the display of the open and closed LUST and ERP sites, we are showing most of them on RR Sites Map. We do plan to display additional information on RR Sites Map in the future. However, due to limited resources, a set schedule for providing this update has not yet been defined. Some of the additional features we plan on showing in the future include:

Financial information on the use of certain public resources. This may include information such as basic contract information, monies spent and costs recovered under Superfund (National Priorities List) and State Funded responses, reimbursements under Dry Cleaner Environmental Response Fund and awards through various state grant and loan programs, including:

- Site Assessment Grants
- Greenspace Grants
- Sustainable Urban Development Zones
- EPA Revolving Loan Fund
- EPA Brownfield Assessment Fund
- Land Recycling Loan

Information regarding site liability, including

- Voluntary Party Liability Exemptions (Certificates of Completion)
- General Liability Clarification letters provided
- Off-site Exemption letter provided

As resources become available, we may add more information. Other ideas for additional layers or attached information may be submitted to the RR program by contacting Jane Lemcke at [jane.lemcke@dnr.state.wi.us](mailto:jane.lemcke@dnr.state.wi.us), or by calling 608-267-0554.
